

Certigna Server Timestamping Stamp RGS**

The Server Timestamping Stamp RGS** offer from Certigna allows to sign countermarks timestamp.

It can be used as a complement to a certificate enabling to digitally sign documents or applications and will provide a certified date for the signature.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

Created in 2009 by Dhimyotis, Certigna is an entirely French certification authority, certified RGS by the DGME and the ANSSI.

Proposing competitive and qualitative certificates, this new actor of French certification provides innovating products to meet any needs.

European qualification

Equipment

Available via Certigna Timestamping service

Functionalities

Timestamping
