

SSL RGS* from Certigna is one of the first server certificates that has been RGS certified and is now eIDAS compliant ("advanced" authentication level) for the web. This kind of product is specially recommended to secure French administrations information systems.

Interesting product between a wildcard and a multiple sites, Certigna server certificates secure 4 sub-domains of the main domain for free. It is also possible to add other domains and sub-domains.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

Created in 2009 by Dhimyotis, Certigna is an entirely French certification authority, certified RGS by the DGME and the ANSSI.

Proposing competitive and qualitative certificates, this new actor of French certification provides innovating products to meet any needs.

Trust seal

Equipment

Requires a recent server
Compatible with browsers released after 2007
