

Certigna Server Code Signature Stamp RGS**

The Server Code Signature Stamp RGS** certificate from Certigna allows to digitally sign applets, applications and other setup...

It can be combined with a Certigna Server Timestamping Stamp certificate RGS* that will provide a certified date for the signature.

This RGS** certified certificate is delivered after a face-to-face meeting (at TBS or at a Delegated Registration Authority's headquarters).

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

Certigna ©

Created in 2009 by Dhimyotis, Certigna is an entirely French certification authority, certified RGS by the DGME and the ANSSI.

Proposing competitive and qualitative certificates, this new actor of French certification provides innovating products to meet any needs.
